

Simple Home Automation with Bluetooth Smart Controls

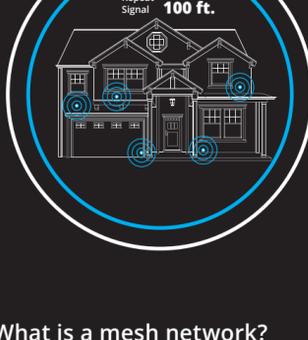

With numerous smartphones, tablets and laptops in every household, homeowners can seamlessly control their existing lighting and appliances around their home all without a hub or gateway required.

The smart home of the future is here now.

What is Bluetooth home automation?

Home automation is the idea and practice of controlling and automating devices and appliances throughout your home. **Using Bluetooth capabilities already built into your phone or tablet**, you can easily control, dim and program custom schedules for lights (and other devices) so you never have to worry about turning them on and off again.

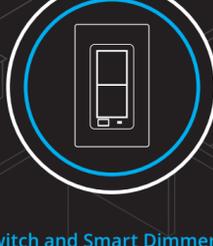

What is a mesh network?

Using Bluetooth Smart Mesh technology, GE Smart Controls turn regular household products into smart devices that securely "talk" to each other by passing data from one device to the next, thereby defying traditional Bluetooth range limitations.

Control the inside of your home

The full line of GE Bluetooth Smart Controls by Jasco enable you to control lighting and other appliances with your phone or tablet through their In-Wall and Plug-in Smart Dimmers & Switches.

The In-Wall Smart Switch and Smart Dimmer use your home's existing wiring, making them easy to install and control your ceiling lights, fans, and other wall sconces or fixtures with full range dimming at your fingertips.

You can also wirelessly schedule and control lights, fans and other small appliances with the Plug-In Smart Switch and adjust the brightness level from **0-100 percent with the Plug-in Smart Dimmer**.

Both devices are easy to use and set up with no wiring required. You simply plug in a light or appliance to the Dimmer or Switch, which plugs into an outlet, and access the mobile app for complete control from your phone or tablet.

Control the outside of your home

With the Plug-In Outdoor Smart Switch you can control backyard lights, holiday lighting, outdoor water features and small pumps for total home control.

What else is needed?

With the Bluetooth products, you will also need to download the **Avi-On app on your phone or tablet** for free in the iOS and Google Play app stores.

What exactly can you do?

You can set and control lighting, dimmers, timers, countdowns and more in real-time from your phone or tablet, as well as custom schedules that will work as programmed regardless of whether your phone is off or out of range.

Save money

Your lighting bill can also be lowered by dimming lights, which cuts energy costs and even extends bulb life.

Using the app, you can create custom 7-day schedules to have your lights automatically turn on as soon as you wake up, turn off shortly after you leave for work and then back on a few minutes before you come back home.

Create countdowns

Lights are not the only devices you can control. **Custom countdowns** are great for wirelessly setting timed countdowns for small appliances, like slow cookers, to automatically turn off after a pre-set amount of time.

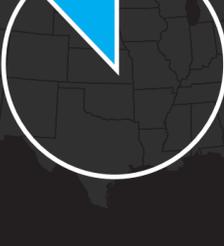

Increase security

Eliminate fears of your home's safety with Bluetooth home automation. Set up random custom schedules that make it look like you're home and create a lived-in look for deterring criminals.

The ideal setup

With no hub, gateway or Wi-Fi connection required, Bluetooth Smart Controls provide an **easy-to-use and affordable solution** for complete control of indoor and outdoor lights and small appliances.

Join the Connected Home Movement

Currently, about 12 percent of U.S. consumers report owning a home automation product and that number is growing everyday.

Save energy, save money and save time with Bluetooth Smart Home Controls and enjoy simple whole home control all from the palm of your hand.
